

Bachelor Industrial Engineering and Business Management

The typical tasks of the Bachelor of Science arise from any situation in which technical and managerial know-how is required. The multidisciplinary way of thinking and the interdisciplinary education of the Bachelor of Science are the reason for the fact that they are often assigned cross-divisional projects and thus multiple job assignments are possible – for example in Materials Management, Technical Sales and Distribution, Customer Service, Controlling, Corporate Planning or Consulting and much more

The extensive theoretical knowledge is acquired in 10 weeks semesters at NORDAKADEMIE Hochschule der Wirtschaft (Business school) in Elmshorn. High-level lectures are guaranteed by the generous technical equipment and study groups of about 30 students. 13 weeks trainings take place in turn in the company. First the students are conveyed basic knowledge of metal processing and electrical engineering; later on they get to know the single departments during their on-the-job training. The students will be introduced to their future tasks by carrying out project works after having acquired the necessary basics.
