

**Bookbinder (Serial Production)**

Bookbinders produce a reader-friendly format made of the printed sections. It is only their work which finally creates the products whose colourful variety and use we all know and appreciate: Books, calendars, booklets, magazines etc. It is quite obvious that this process includes a lot of different work flows – but these are based on knowing the respective machine sequences and functions. This is why today's bookbinders really have what it takes to cope with measuring and control technology. Bookbinders operate a whole pool of machines and production lines for cutting, folding, collecting, gathering, stitching and binding – of course also for gluing, hole-punching, perforating, drilling, embossing, separating, forming, refining and other production processes. As everything needs to run smoothly, the bookbinders also look after "their" machines in terms of maintenance and functionality.

**Requirements**

- At least CSE graduation
- Technical basic knowledge
- Care and skilfulness
- Spatial sense
- Interested in mechanics and electronics
- Ability to cooperate within a team

**Duration**

3 years

**Place of Education**

Dresden, Nuremberg
